Capital Sustainability Diagnostic

CAPITAL BRIDGE ADVISORY JOURNEY

How to read this report

Step 1 — Can your money last?

We look at your money in three simple steps: (1) Can it last at the lifestyle you want? (2) Is your overall setup strong and balanced? (3) If markets fall or life changes, how might you cope? This report uses the Forever Income Model. It shows, using the numbers you entered, how long your savings and investments may support your spending. It is for learning and planning with a qualified adviser — not a product recommendation. On the platform, Step 2 (Capital Health) and Step 3 (Capital Stress) add the next layers when you are ready.

Client Financial Snapshot

Annual Lifestyle Spending: RM 120,000

Loan Cost / Interest Rate: 3.55%

Investment Return Assumption: 7%

Inflation Assumption: 2%

Total Capital Available: RM 770,000

Scenario Context

Base Scenario Projection — Return Assumption: 7% | Inflation: 2%

Executive Summary

Net Strategic Withdrawal (Annual):

RM 154,952

Total Capital Available:

RM 770,000

Capital Sustainability Horizon:

5.9 years

Forever Capital Target:

RM 3,099,039

Model Assumptions

Strategic Return Assumption: 7%

Long-Term Inflation Assumption: 2%

Withdrawal Model: Inflation Adjusted

Capital Bridge Progress (Current Capital vs Forever Capital Target):	24.8%
Capital Efficiency Ratio (Current Capital ÷ Forever Capital Target):	24.8%

Annual Income Requirement

Base Lifestyle Expense: RM 120,000/year

Property Debt Service: RM 34,952/year

Family Income Offset: -RM 0/year

Net Strategic Withdrawal: RM 154,952/year

Current Capital Position

Cash Reserves: RM 20,000

Investment Portfolio: RM 250,000

Real Estate Unlockable Value: RM 500,000

Total Capital Available: RM 770,000

Capital Gap to Sustainability

Forever Capital Target: RM 3,099,039

Total Capital Available: RM 770,000

Capital Gap: RM 2,329,039

Capital Sustainability Horizon

Estimated years current capital can sustain withdrawals: 5.9 years

Financial Interpretation

Based on the current capital structure and withdrawal level, the portfolio is projected to sustain income for approximately 5.9 years before depletion.

Achieving long-term financial sustainability would require an estimated capital base of RM 3,099,039.

Discussion Topics with Your Financial Advisor

- Capital growth strategy
- Income sustainability planning
- Property equity optimization
- Withdrawal efficiency

Methodology Note

The Capital Bridge model evaluates the sustainability of capital reserves relative to lifestyle spending, expected investment returns, and inflation assumptions.

The analysis estimates the capital required to support long-term income sustainability without depletion using long-term withdrawal modeling.

This diagnostic is designed to support financial planning discussions with qualified financial professionals.

Advisory closing for Step 1 — Can your money last?

THE LION'S VERDICT

Verdict's Score: **15** out of 100

NOT SUSTAINABLE

Your capital can support your lifestyle for about 5.9 years at your current spending. After that, you could run out unless something changes. To sustain this lifestyle long term, you need about RM 2,329,039 more in capital versus the forever target. The gap is large relative to the target — treat this as urgent.

Strengths

• You have RM 770,000 in total capital available

• Your net strategic withdrawal is about RM 154,952 per year

• Your sustainability horizon reads 5.9 years

Risks

• You may run out of capital within twenty years at this spend

• The capital gap is large (RM 2,329,039 versus target) — acting sooner reduces risk

Income & capital gap

Your net strategic withdrawal is about RM 12,913 per month. At your real return assumption, capital supports about RM 3,208 per month before tax effects. That is about RM 9,704 per month above what capital alone supports at this return. Forever capital target is about RM 3,099,039.

Progress to forever capital

You hold RM 770,000 toward a forever target of RM 3,099,039 (25% of forever target). Horizon is under twenty years — prioritise closing the gap or cutting spend.

Strategic options

CONSERVATIVE: Lower net spending or increase offsets (family income, salary). Reduces withdrawals and extends how long capital lasts Trade-off: You may need to change your lifestyle.

BALANCED: Review return and inflation assumptions with a professional. More realistic targets reduce surprise and bad decisions Trade-off: Takes time and honest inputs.

AGGRESSIVE: Add capital, extend earning years, or unlock property value carefully. Closes the forever gap faster when done safely Trade-off: Can mean less liquidity or more complexity.

Capital unlock

WORSENS. Unlocking or borrowing before the gap is closed is likely to worsen outcomes. Fix the sustainability picture first.

Scenario actions

Strong markets: Model -1% / +1% real return bands around your base case.

Base case: Keep assumptions steady and rerun after any large life or market change.

Weak markets: Stress-test higher property rates or shorter amortisation if debt is material.

Priority actions

• Document your “minimum viable lifestyle” spend.

• Set a review trigger if assets fall 15% from today’s level.

• Re-run the model after any large change to spending or assets

• Write down the minimum lifestyle you could live with if markets weaken

If you do nothing: If you do nothing, erosion and stress paths are likely to dominate: runway shortens, drawdowns hurt more, and optional goals may become unreachable. The lion is asking for at least one lever—capital, time, return realism, or spending—to move within the next review cycle.

What to change: follow the priority list — usually lower spend, add capital, or fix return assumptions first.
