CAPITAL BRIDGE™
Strength Behind Every Structure

INCOME ENGINEERING — STRATEGIC WEALTH REPORT

Income Engineering: shows where capital can be unlocked, allocated, or strengthened under your stated assumptions.

Prepared for: **Sample Client**

Generated: **16 April 2026 at 20:00**

CONTENTS

Section A — Opening
Where this report fits
Lion's Verdict
Section B — Advisor Read
Your inputs and assumptions
Income, expenses, and capital unlocking
Investment allocation
Coverage and sustainability
Areas to improve
Section C — Deeper analysis
Sensitivity to assumptions
How this model works
Appendix and next steps

SECTION A — OPENING

OPENING

What this shows

Where this report fits in your Capital Bridge journey, and your Lion's Verdict if it is included in your plan.

Why this matters

This gives context first, then the supporting numbers, so the report is easier to follow.

CAPITAL BRIDGE FRAMEWORK

CAPITAL BRIDGE ADVISORY JOURNEY

How to read this report

Step 1B — Engineer your income structure

This report follows your sustainability check in Forever Income.

At this stage, the question shifts from:

"Can this structure last?"

to:

Where can income be improved within your current structure?

Which assets can be turned into usable capital?

How can surplus be used to build long-term capital growth?

WHAT THIS MODEL DOES

The Income Engineering Model looks at how your capital can be used, not just where it sits.

It shows:

Where income already exceeds your needs (surplus)

Where capital may be unlocked from existing assets

How using capital, including borrowing, may affect long-term outcomes

WHY THIS MATTERS

Different capital structures can lead to very different outcomes over time.

Instead of assuming the right answer, this model helps you compare options by showing:

how the cost of capital compares with expected outcomes

how each decision affects the overall picture under the same assumptions

how the structure performs as a whole

All results are based on the assumptions in this report and are not guaranteed.

WHAT HAPPENS NEXT

From here, the journey continues:

Capital Health → shows whether the structure remains sustainable over time

Capital Stress → shows how the structure may behave under changing conditions

THE LION'S VERDICT

STABLE

Lion score: 100 / 100 · STABLE

"The lion remains unaffected. Pressure stays outside. The core is preserved."

SUMMARY

Your current structure produces RM15,825 against RM8,000, leaving a surplus of RM7,825.

Performance remains strong across conservative assumptions. Variability is absorbed. No strain appears.

WHY THIS IS HAPPENING

This surplus exists because income exceeds expenses, allowing capital to remain intact.

SYSTEM STATE

Lion Score: 100 · green

WHAT YOU SHOULD DO NEXT

At a Lion Score of 100, the structure has room to optimise from strength while preserving the existing buffer.

SECTION B — ADVISOR READ

ADVISOR READ

What this shows

Your assumptions, income, loans, capital unlocking lines, allocations, coverage, and headline results — the key numbers being reviewed.

Why this matters

This gives you one clear set of numbers before moving into deeper analysis and next steps.

INPUT SUMMARY

YOUR MODEL INPUTS

The tables below show the assumptions used for this review, including your targets, income, any loans used to unlock capital, each capital unlocking line, and your investment buckets.

EXPECTATIONS

Currency: RM

Target monthly expenses: RM8,000

MONTHLY INCOME

Salary / Wages	RM12,000
Rental Income	RM0
Family Contribution	RM0
Other Recurring Income	RM0
Total monthly recurring income	**RM12,000**

LOAN REPAYMENTS FROM CAPITAL UNLOCKING

No loan facilities modelled from unlocking capital.

© Capital Bridge. All rights reserved. Capital Bridge™ and associated marks are proprietary. Unauthorised use, reproduction, or distribution is prohibited.

CAPITAL UNLOCKING OPTIONS

No unlocking-capital lines added.

INVESTMENT BUCKETS

Capital Preservation	RM200,000 · 3% p.a.
Retirement Savings	RM150,000 · 5.5% p.a.
Income Assets	RM180,000 · 5.5% p.a.
Growth Assets	RM250,000 · 7.5% p.a.
Diversifiers & High-Risk	RM50,000 · 6% p.a.
Total allocation	**RM830,000**

VISUAL ANALYSIS

COVERAGE BASED ON YOUR INPUTS

What this shows

How much of your total monthly outflows are covered by monthly inflows, including modelled investment income, in both a typical month and the weakest month modelled.

Why this matters

An average month can hide a weaker one. Looking at both the typical month and the weakest month gives a clearer picture.

Median monthly coverage: **197.8%** · Weakest month: **197.8%**

Interpretation

Together, these two views show whether the income structure is genuinely robust or only appears workable under normal conditions.

KEY OUTCOMES

STATUS	
Investment Income	+RM3,825
Total Capital	RM830,000
SURPLUS	197.8%
Status	SUSTAINABLE

SECTION C — DEEPER ANALYSIS

DEEPER ANALYSIS

What this shows

What the results mean, what may need attention, and what to consider next.

Why this matters

This helps turn the numbers into practical next steps.

STRATEGIC INTERPRETATION

WHAT THIS MEANS

SUSTAINABLE

On these assumptions, recurring inflows and modelled investment income cover expenses and loan commitments comfortably, including in a weaker month. The structure looks balanced for the story you told the model.

NET MONTHLY POSITION

What this shows: Your total monthly position after accounting for all inflows and outflows.

This is calculated as:

(Total expenses + total loan repayments)
minus
(total income + total investment income)

Interpretation:

- If the result is positive (surplus): more income is coming in than going out
- If the result is negative (deficit): part of your spending depends on capital drawdown

Important:

A surplus does not always mean the structure is strong.
A deficit does not always mean the structure is weak.

What matters is how capital is being used:

- A surplus may be underutilised if it is not building future income
- A deficit may be acceptable if capital is being deployed to grow long-term income

What to do next:

- If there is a deficit, review the Income Engineering Model to see where it can be reduced or made intentional
- If there is a surplus, assess whether it can be redirected to strengthen long-term income and capital growth

NEXT STEPS

KEEPING THE PLAN CREDIBLE

Keep return assumptions conservative enough to survive scrutiny.

Revisit the scenario when income, expenses, or debt service changes.

Schedule an annual check-in even when the picture looks strong.

“Steady structure deserves steady discipline — not complacency.”

APPENDIX AND NEXT STEPS

DISCLOSURES AND NEXT STEPS

What this shows

How to use this report, the regulatory context, and the next step in your Capital Bridge journey.

Why this matters

This closes the report clearly by explaining what it is for and what to review next with your adviser.

DISCLOSURES AND HOW TO USE THIS REPORT

This document is generated from the Capital Bridge Income Engineering model and is intended for discussion with your adviser. It does not constitute personal advice. The footer on each page contains the legal notice.

HOW TO USE THIS REPORT

- Review it alongside your live model inputs during an advisory discussion.
- Treat all illustrations as scenario-based, not guaranteed outcomes.
- If assumptions change materially, refresh the live model before the next review.

Recommended next step: Capital Health

Capital Health shows whether your capital structure can remain sustainable over time under your stated assumptions. It is the natural next step once income and allocation are aligned in this model.

Next step: Run Capital Health to continue your advisory journey.

This report is for advisory purposes only. Illustrations rest on your assumptions and are not a guarantee of future outcomes. The footer on each page carries the full legal notice.
